

Make life **easy** for users who **file** a lot of emails

Assist takes best practice filing and suggests the most suitable location for new content

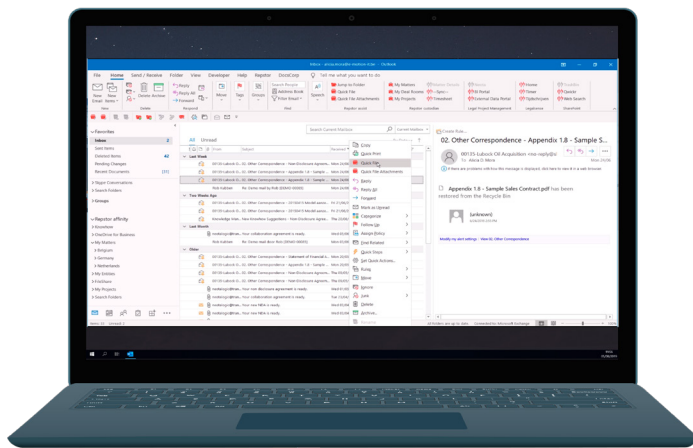

Use predictive filing to increase your efficiency

Whether your information workers are engaged in projects, case management or client correspondence, Repstor assist makes it easy to keep track of everything by suggesting where received or sent emails and attached content are filed as users receive and interact with them in Office 365/Outlook.

Rather than team members having to scroll back through old email trails or search their ECM/document management system to pinpoint the latest information, they can be confident it's all quickly accessible from the correct shared folder in the designated content repository.

A companion product to Repstor affinity, **Repstor assist** provides a predictive filing capability, that quickly learns where related content and emails need to go. By prompting users to file everything in the right place, it ensures that no information, documents or related correspondence go astray.

Stand Out Benefits

Enforces best practice

- Learns quickly from the most organized information workers about the best place to file emails & attachments, prompting others to follow suit – proactively suggesting destination folders rather than leaving this up to each individual.

Boosts speed & productivity

- Quick to self-train, accelerating categorization and accurate filing, so no more time is lost to tracking down misfiled or mislaid content.

Enhanced IT ROI

- Boosts ECM payback, as users default to storing and accessing all content there
- IT burden is reduced as more content is stored where it should be, without unnecessary duplication.

Continuous productivity

- Repstor assist offers off-line working, allowing the same easy filing experience while on the move.

Broad application

- Like Repstor affinity, the Repstor assist module is platform-agnostic, which means it can be used for filing to content stores and file shares including SharePoint, M-Files, Microfocus Content Manager, Opentext eDocs, Dropbox, Box, iManage Work, Meridio, HighQ, Dynamics CRM and more.

What our customers are saying:

“Repstor assist delivered an immediate 87% improvement on time spent on project-related filing.”
